Write-Up

NOTE: Hawai'i does not have a trackman unit so data is only based on road games with a trackman unit

Magdaleno was the anchor of a dominant Rainbow Warrior's staff in 2026, posting a 2.36 ERA across 95.1 innings while showcasing one of the more unique repertoires in the class. Working from a large frame with a rocking delivery and a long, stabby arm action, he creates deception despite below-average velocity. The profile is built around a riding fastball, a devastating splitter, and multiple breaking-ball looks that allow him to attack hitters from several movement planes. While the repertoire lacks a true power offering, the combination of strike throwing, movement diversity, and starter durability gives Magdaleno a strong foundation as a professional starter.

The FB succeeds despite sitting just under 90 mph. The pitch generates nearly 19 inches of IVB and over 6.5 feet of extension, allowing it to play above the radar gun at times. While the ride is comfortably above average, the resulting -5.06° VAA creates a relatively steep approach that limits how much the carry ultimately impacts hitters. As a result, the pitch is more dependent on command than raw shape to generate value. Magdaleno consistently worked the FB to the upper third of the zone where it generated the majority of its swing-and-miss, showing a strong understanding of how to maximize the

pitch's characteristics. The shape is intriguing, but the below-average velocity and steeper approach limit the professional projection. It profiles as a fringe-average major league offering that plays best when paired with his splitter and located above the zone. 40/45+ pitch

The CT serves as a bridge between the FB and his larger breaking balls. The pitch features modest cut with above-average carry and consistently lives around the edges of the strike zone. Magdaleno primarily used it as a strike-stealing offering rather than a chase pitch, resulting in a strong 41% zone rate and solid overall command. The shape is not overwhelming, but it gives hitters a distinctly different look from the FB while helping prevent them from sitting on vertical movement. It projects as a useful complementary weapon capable of generating weak contact against both handedness groups.

40/45+ pitch

The CB is a depth-oriented breaking ball with solid vertical characteristics and enough firmness to land for strikes. Magdaleno demonstrated above-average feel for locating the pitch in the lower third of the zone, particularly against right-handed hitters where it frequently stole early-count strikes. The swing-and-miss production was modest, generating only a 4.5% whiff rate, but the pitch functions effectively as a setup offering that keeps hitters from exclusively hunting the FB and SPL. The shape is average, though the command currently allows it to play slightly above its raw movement profile.

40/45+ pitch

The SL is used sparingly but provides another distinct movement profile. Unlike the CB, the SL works primarily through lateral movement and maintains its shape well throughout flight. While the usage was limited, Magdaleno demonstrated the ability to land it for strikes and occasionally bury it beneath the zone against right-handed hitters. The lack of velocity separation from the CB and limited usage cap the projection somewhat, but the pitch gives him another avenue to attack hitters and adds additional shape diversity to the arsenal. 35/40+ pitch

The SPL is the carrying pitch and one of the better offspeed offerings in the class. Thrown with substantial tumble and late fade, the pitch consistently generated uncomfortable swing decisions from hitters on both sides of the plate. The location data shows a clear intent to finish the pitch below the strike zone, particularly against right-handed hitters, where it accumulated the majority of its 52 total

whiffs. The results were exceptional, generating a 54.3% chase rate, 43.3% whiff rate, and 25.6% SwStr%. Just as importantly, the pitch maintained enough strike quality to avoid becoming a purely chase-dependent offering. This is already a legitimate professional out pitch and should remain the foundation of the profile moving forward. 55/60+ pitch
