Write-Up

Krodel is a tall 6-foot-4 right-hander whose profile is built around a quality fastball and one of the better changeup-slider combos. The arsenal attacks hitters from multiple movement planes and features four distinct offerings that each serve a purpose. While there is no true plus velocity, the fastball traits, extension, and offspeed quality give Krodel a legitimate chance to become a starter. The profile projects as a professional starter or high leverage reliever due to the combination of arsenal depth, strike throwing, and swing-and-miss ability.

The FB serves as the foundation of the arsenal. Averaging 92.1 mph with 20 inches of IVB, the pitch possesses excellent ride characteristics while coming from a relatively low release height and above-average extension. The resulting -4.52 VAA gives the pitch a flatter approach than most fastballs in this velocity band and allows it to generate swing-and-miss throughout the upper portion of the strike zone. The results support the shape, with a 23.1% whiff rate and nearly 30% CSW. Krodel consistently worked the pitch at the top of the zone against hitters from both sides and demonstrated enough command to maximize the underlying traits. The velocity prevents an elite projection, but the shape and release characteristics provide a strong foundation. 45/50+ pitch.

The CB is a true downer with exceptional depth and steep vertical movement. The pitch showcases over 16 inches of negative IVB and operates on an entirely different plane than the slider. Krodel demonstrated solid strike-throwing ability with the pitch, landing it in the zone over 32% of the time

while still generating a 42.9% whiff rate. The shape is loud, though the command remains more strike-stealing than bat-missing at present. The pitch projects as an above-average complementary breaker capable of disrupting timing and stealing strikes early in counts. 45/50+ pitch.

The SL is the best breaking ball in the arsenal and features over 16 inches of gloveside movement. Unlike the curveball, the slider operates laterally and consistently generated chase off the outer edge. The 40.8% whiff rate and 17.5% SwStr rate validate the shape, and Krodel demonstrated a clear feel for locating the pitch beneath the zone against right-handed hitters. The separation from the curveball is excellent, giving him two distinct breaking-ball looks rather than redundant shapes. It projects as a quality professional secondary. 50/55+ pitch.

The CH is the carrying pitch for the future value and one of the better offspeed offerings in the sample. Featuring nearly 19 inches of fade and substantial velocity separation off the fastball, the pitch consistently generated uncomfortable swing decisions. The 46.9% chase rate, 54.5% whiff rate, and 29.5% SwStr rate are all elite outcomes. Krodel consistently located the pitch below the strike zone, allowing the movement profile to work at its highest effectiveness. It already projects as a legitimate professional out pitch and should remain the separator in the arsenal moving forward. 55/55+ pitch.
