Write-Up

Roblez possesses one of the most analytically attractive arsenals in the sample. Working from a high release point and steep arm slot, he generates elite vertical characteristics on the FB while pairing it with three secondaries that each produced exceptional swing-and-miss numbers. The repertoire lacks a traditional weak link and offers legitimate solutions against hitters from either side of the plate. The profile already resembles that of a professional starter.

The FB is an unusual pitch. Despite entering the zone with a relatively steep -4.95° VAA, the pitch generates an exceptional 24.3 inches of IVB from a 6.71-foot release height. The shape consistently plays at the top of the strike zone and generated a 25.8% whiff rate despite modest velocity. While the steep approach prevents the pitch from fully maximizing the elite ride, the combination of shape, extension, and strike-throwing ability still creates an above-average professional projection. 50/55+ pitch.

The CB serves as a true vertical weapon. The pitch generated a 60% whiff rate and 48.5% CSW while consistently finishing beneath the strike zone. The shape itself is strong, though the command remains inconsistent as evidenced by the sub-25% zone rate. When executed, however, hitters simply struggled to make contact. The pitch projects comfortably above average and may continue climbing with improved consistency. 50/55+ pitch.

The SL provides a completely different look than the curveball and may ultimately become the more valuable professional offering. Featuring over 10 inches of glove-side movement, the pitch generated a 57.9% whiff rate and over 21% SwStr. Roblez demonstrated a strong understanding of how to use it

against right-handed hitters, frequently locating the pitch beneath the zone for chase. The separation from the CB is excellent and gives him two distinct breaking-ball looks capable of finishing at-bats.

55/60+ pitch.

The SPL is the carrying pitch. Producing a 56.7% chase rate, 55.8% whiff rate, and 33.3% SwStr rate, the pitch generated some of the best swing-and-miss numbers in the report. The shape creates significant separation off the FB and consistently pulled hitters beneath the baseball. Roblez showed confidence using the SPL against both handedness groups, and the results suggest the pitch already possesses professional out-pitch utility. 60/65+ pitch.
