Write-Up

Clark projects as a professional starter built around a quality fastball and a pair of bat-missing secondaries. The profile combines above-average strike throwing, a starter's workload, and enough arsenal depth to navigate lineups multiple times. While he does not possess the pure velocity of some of the higher-profile arms in the class, the overall mix is balanced and gives him multiple avenues to generate outs.

The FB serves as the foundation of the arsenal. Averaging 93.3 mph with strong extension and a relatively flat vertical approach angle, the pitch plays effectively throughout the upper third of the strike zone. Clark generated a 30.9% whiff rate while throwing the fastball more than 60% of the time, a strong indicator that the pitch can miss bats despite heavy usage. He consistently attacked the zone, worked ahead in counts, and demonstrated the ability to challenge hitters without sacrificing effectiveness. The velocity, shape, and strike throwing support an above-average professional projection. 50/55 pitch.

The CB gives Clark a true vertical weapon. Thrown in the mid-70s with substantial depth and sweep, the pitch generated a 52.2% whiff rate while consistently producing empty swings beneath the strike zone. The shape creates significant separation from the fastball and gives him another offering capable of finishing at-bats. While the command remains less consistent than the fastball, the movement profile and swing-and-miss ability support an above-average projection. 50/55 pitch.

The SL is used less frequently than the rest of the repertoire but provides another movement profile for hitters to consider. The pitch generated useful swing-and-miss in a limited role and helped bridge the

gap between the larger curveball shape and the changeup. The current projection is more complementary than carrying, though the pitch adds valuable arsenal depth. 40/45 pitch.

The CH is the best secondary offering in the arsenal. Averaging 83.9 mph with quality arm-side movement, the pitch generated a 48.2% whiff rate and 28.0% swinging-strike rate. Clark consistently used the offering against hitters from both sides of the plate and demonstrated confidence throwing it in leverage counts. The pitch mirrors the fastball effectively before moving beneath barrels, giving him a reliable bat-missing weapon and a strong foundation against opposite-handed hitters. 55/60 pitch.
