Write-Up

DeRias is one of the more difficult evaluations in the class. The raw stuff is better than the statistical performance, with a mid-90s fastball, a quality sweeper, and a changeup that generated some of the strongest swing-and-miss numbers in the arsenal. The challenge throughout 2026 was not finding bat-missing pitches, but consistently locating them well enough to avoid damage. The profile enters 2027 with a wider range of outcomes than most of the arms on the board, making strike quality and command development critical areas to monitor.

The FB serves as the foundation of the arsenal. Averaging 93.5 mph with nearly 17 inches of induced vertical break and over a foot of horizontal movement, the pitch possesses above-average raw characteristics. DeRias showed the ability to generate swing-and-miss when working at the top of the strike zone, but inconsistent location frequently left the pitch in damage areas. The underlying traits suggest more effectiveness than the results ultimately showed, and improved command would allow the shape to play closer to its potential. 50/55 pitch.

The CT provides a distinct movement profile and serves as a bridge between the FB and SWP. The pitch generated modest swing-and-miss while helping DeRias attack multiple velocity bands throughout an at-bat. The shape is useful, but the offering currently plays more as a supporting piece than a primary weapon. Continued refinement of location would increase the overall effectiveness. 40/45 pitch.

The SWP is the best breaking ball in the arsenal. Averaging 80.0 mph with more than 15 inches of sweep, the pitch generated a 37.0% whiff rate and consistently produced uncomfortable swings.

DeRias relied on the offering heavily in two-strike counts and showed confidence throwing it for both chase and called strikes. The movement profile projects comfortably to professional baseball and gives him a reliable swing-and-miss option. 50/55 pitch.

The CH generated the strongest swing-and-miss results of any pitch in the mix. Despite limited usage, the offering produced a 55.6% whiff rate and 20.0% swinging-strike rate while creating substantial movement separation from the FB. The pitch gives DeRias another viable weapon against opposite-handed hitters and provides an additional avenue for missing bats. Increased usage would strengthen the overall starter projection. 45/55 pitch.
