Write-Up

Edwards possesses some of the loudest pure stuff in the class, pairing upper-90s velocity with two legitimate bat-missing secondaries. The profile is built around overwhelming hitters rather than sequencing and pitchability, with the FB and SL doing most of the heavy lifting. While the strike throwing remains inconsistent at times, the quality of the arsenal gives him one of the higher ceilings among the remaining arms on the board.

The FB serves as the foundation of the profile. Averaging 96.1 mph and reaching 99.1 mph, the pitch combines premium velocity with quality extension and above-average carry. Edwards consistently challenged hitters in the strike zone and generated enough swing-and-miss to support heavy usage throughout the season. While the command can drift at times, the velocity and shape allow the pitch to overpower hitters even when execution is less than perfect. The offering projects comfortably as an above-average professional fastball. 55/60 pitch.

The SL is the best pitch in the arsenal and one of the better breaking balls in the dataset. Thrown in the mid-80s with substantial glove-side movement, the pitch generated a 60.5% whiff rate and a 27.1% swinging-strike rate while functioning as the primary put-away offering. Edwards routinely landed the pitch beneath the zone and consistently generated chase from both right-handed and left-handed hitters. The shape, velocity, and results all support a plus professional projection. 60/65 pitch.

The CH gives Edwards a third legitimate bat-missing offering and strengthens the overall starter projection. Thrown nearly 88 mph with low spin characteristics, the pitch generated a 64.3% whiff rate and 36.0% swinging-strike rate despite relatively modest usage. The pitch provides meaningful

separation from both the FB and SL and gives him another solution against opposite-handed hitters. The shape and results support an above-average projection moving forward. 50/55 pitch.
