Write-Up

Wech features an elite fastball-changeup pairing, attacking with a vertical-oriented four-seamer and a devastating offspeed weapon that misses bats at an exceptional rate. Although his 2026 performance fluctuated, the raw specs suggest a prospect with a high-end professional ceiling. The repertoire challenges hitters across several movement planes and includes three distinct finishers, providing a durable foundation for a rotation role. Refining the strike-throwing and overall location quality remains the primary developmental hurdle, as the underlying metrics already comfortably project him to the next level.

The FB serves as the foundation of the arsenal. Averaging 92.6 mph with over 18 inches of ride, the pitch generates quality carry characteristics while benefiting from more than 6.5 feet of extension. The resulting -4.67 VAA allows the pitch to play effectively at the top of the zone, where much of the swing-and-miss is generated. Wech produced a 30.0% whiff rate on the pitch, an impressive mark for a fastball carrying this type of workload. He consistently attacked with the FB in all counts and demonstrated confidence elevating against both handedness groups. While occasional command lapses led to damage, the shape, velocity, and extension all support an above-average projection. 50/55 pitch. The CT functions as a bridge pitch between the fastball and his larger breaking ball. Holding nearly 90 mph with quality carry, the pitch generates short glove-side movement and enough firmness to disrupt timing. The shape is not overwhelming, but Wech consistently lands it in the zone and uses it

effectively to change the hitter's eye level. The limited usage makes projection difficult, though the velocity and strike throwing ability provide value. 40/45+ pitch.

The CB is a true vertical breaker with quality depth and enough shape separation from the rest of the arsenal to keep hitters uncomfortable. Wech used the pitch frequently in two-strike counts and generated a 50.6% whiff rate overall. The pitch operates beneath the zone and works particularly well off the riding fastball, creating a difficult north-south combination. While the command can fluctuate, the swing-and-miss ability is already evident and projects comfortably at the professional level. 50/55 pitch.

The CH is the carrying pitch and the best offering in the arsenal. Thrown with extremely low spin and quality velocity separation, the pitch generated a 47.8% chase rate, 46.4% whiff rate, and 28.7% SwStr rate. Wech showed confidence throwing it to both handedness groups and consistently located it beneath the zone where the movement profile could play at its highest effectiveness. The pitch mirrored the FB long enough to force uncomfortable swing decisions before diving beneath barrels. It already projects as a legitimate professional out pitch and gives the profile a clear separator. 55/60+ pitch.
