Write-Up

Zatkowski is a low-slot left-hander whose profile is built around deception, movement diversity, and one of the more unique release characteristics in the dataset. Rather than overpowering hitters with velocity, he attacks from a difficult angle and presents five distinct movement profiles, forcing hitters to constantly adjust throughout an at-bat. The arsenal lacks a true plus pitch, but the collective effect of the repertoire creates a very uncomfortable look and supports a professional starter projection.

The FB serves as the foundation of the arsenal. Averaging 88.8 mph, the pitch features substantial arm-side movement from an exceptionally low arm slot, creating a unique visual look for hitters.

Despite below-average velocity, the pitch generated a respectable 22.3% whiff rate and consistently produced weak contact. The movement profile and release characteristics allow it to play above the radar gun, though the lack of velocity caps the ultimate ceiling. 40/45+ pitch.

The SI is used primarily as a contact-management offering. Featuring nearly 18 inches of arm-side movement, the pitch generates ground balls but lacks the bat-missing ability of the rest of the arsenal.

The shape provides utility against left-handed hitters and gives Zatkowski another movement profile to keep hitters off balance. 40/45 pitch.

The SL functions as a bridge pitch more than a true out pitch. The movement profile is relatively modest compared to the rest of the repertoire, but the offering provides another velocity band and

helps prevent hitters from sitting on the sweeper. The limited usage and average results point toward a complementary role. 40/45 pitch.

The SWP is the best breaking ball in the arsenal. Featuring over 16 inches of sweep, the pitch generated a 28.2% whiff rate and consistently forced uncomfortable swing decisions. Zatkowski frequently used the pitch as a chase offering against left-handed hitters and as a strike stealer early in counts. The shape is distinct and gives him a legitimate professional secondary. 50/55 pitch.

The CH may ultimately be the most important pitch in the profile. The offering mirrors the fastball effectively while generating substantial armside movement and a healthy amount of swing-and-miss. Zatkowski showed confidence throwing the pitch to hitters from both sides and used it heavily throughout the season. The movement profile and usage patterns support an above-average projection. 50/55 pitch.
